SUMMARY

GoHighLevel specialist with a software-development background, building funnels and marketing automations for service businesses. 18 delivered builds: 12 automation systems (38 workflows) and 6 funnels across roofing, plumbing, legal, veterinary, auto-care, fitness and real estate. Writes the custom code and API integrations a no-code builder stops short of.

EXPERIENCE

Independent - GoHighLevel Specialist & Funnel Builder

Freelance, Philippines · 2024 - Present

- Built 18 client projects in GoHighLevel spanning lead routing, booking, payment, win-back, reputation and AI-assisted qualification.
- Automated lead handling end to end - intake, qualification, routing, booking, payment, win-back and review requests - so every lead always has a next step and nothing is dropped.
- Built AI-assisted intake and qualification with hard gating, including urgency detection on emergency services and AI voice qualification, to stop unqualified bookings reaching the calendar.
- Recovered missed calls, abandoned checkouts and dormant customers with automated text and email sequences, using reply-based suppression so contacted leads stop receiving campaigns.
- Connected GoHighLevel to third-party systems over REST APIs and webhooks (payments, accounting, file storage, email) using Make, Zapier and n8n where no native integration existed.
- Delivered 6 funnels and marketing sites with custom code: filterable galleries, multi-step checkout, booking flows and before/after sliders. Mobile-first, wired to GoHighLevel for capture.
- Advised clients on offer structure, follow-up timing and copy alongside implementation, so automations were pointed at a business outcome rather than deployed for its own sake.

Software Developer (Low-Code)

Stratpoint · 2022 - 2024

- Delivered client applications on OutSystems, from scaffolding through production release.
- Worked in Agile delivery teams with business analysts and client stakeholders, translating requirements into working software and iterating on feedback.

Frontend Developer (Intern)

Fligno Software PH · Apr - Aug 2022

- Built features for a crowdsourcing web platform in TypeScript and Next.js, including API integration and interface delivery.

Web Developer (Intern)

Ling Ling Restaurants · 2021 - 2022

- Developed features for an interbranch point-of-sale system in React and JavaScript, on operational software in live use across restaurant branches.

SKILLS

GoHighLevel: Contacts and lead records, pipelines and opportunities, calendars and booking, workflows and automations, funnels and websites, marketing campaigns, custom objects, snapshots and sub-account setup, PSGCIMBTFLO automation framework

Integrations: REST APIs, webhooks, Make, Zapier, n8n, Stripe, Xero, Asana, Gmail and Google Drive
